

BROOME INTERNATIONAL AIRPORT

ARRIVALS TERMINAL

AIR CONDITIONING

Broome International Airport (BIA) is proud to unveil the completion of air-conditioning works in the arrival's hall. The new ducted air-conditioning system will allow the temperature in the arrivals hall to remain at approximately 25 degrees, providing additional comfort for all arriving passengers.

BIA's Chief Executive Officer, Paul McSweeney, was extremely pleased with the upgrade and said "this adds to passenger comfort at BIA, particularly in the hotter months." He added that it demonstrates BIA's continued ability to work closely with local contractors, delivering on-time quality projects which are focused on improving passenger experience.

The works complete Project 3 of BIA's \$14 million major terminal redevelopment and were contracted to local builder H&M Tracey.
